PROTAN A3

Special compound of tannins and softening agents in one compact product for the retanning and fatliquoring in one application process.

PROPERTIES:

- light brown powder
- Active substance: 94% \pm 2
- pH (solut. 1:10): 5.8 – 7
- Charge: anionic

ADVANTAGES OF USING IT:

- Provides good softness and fullness to the leather with a very soft touch to grain.
- Is suitable for the production all kind of crust leather, especially upholstery and soft nappa types.
- Very short process time, reduced water and chemical consumption.
- Minimise the overall process costs.

APPLICATION

- Is applied in the same bath as the neutralisation process of the leather, followed by dyeing and fixation.
- The recommended offer is 12-15% to achieve the required softness and fullness for the leather article.
- Running time vary from 60-120 min, not included the neutralization and acid fixation time.

PACKAGING:

25 KG paper bags
