VEGTAN E

Retanning agent for chrome leathers.

COMPOSITION

Blend of vegetable tannins and condensed products of phenol sulphonic and naphthalene sulphonic acids.

ANALYTICAL DATA AND MAIN PROPERTIES

VEGTAN E is a reddish brown powder with the following analytical values:

Dry substance %	88 minimum
pH (sol. 10%)	4,0 ± 0,5

VEGTAN E has been especially developed for the retannage of chrome tanned leathers where good roundness and fullness are required, moreover it has excellent dispersing and filling powers. It can be used in combination with other vegetable extracts and syntans in order to improve its penetration and distribution.

INDICATIONS OF QUANTITIES FOR SPECIFIC USES

- For nappa shoe upper, nubuck and corrected grain articles on chrome tanned leathers : 4-8%.
- For finished splits : 3-6%.

The above percentages data are referred on shaved weight.

Warning: VEGTAN E is hygroscopic. We recommend to store it in a dry place and to properly close the bags after each product drawing. "The information given in this leaflet is, to our knowledge, correct and complete. No responsibility can be accepted for an incorrect use of the product".
