PROTAN T

BLEND OF LIGHT TANNINS

ANALYSES

TOTAL SOLIDS Min.	92.0%
pH SOLUTION 2%	3.0 - 4.0

PROPERTIES AND APPLICATIONS

PROTAN T is a milled product obtained from the grinding of plant materials naturally rich in tannins, both pyrogallol and catechin. The high yield of PROTAN T is given by the particular fineness of the light-coloured powder.

PROTAN T gives leather interesting properties compared to other natural tannins:

- very light color and good light fastness, thanks to the absence of coloring substances
- superior resistance of the grain to breaking load compared to leather tanned with other vegetable extracts
- good fullness and softness, with fine and firm grain
- excellent yield whenever you want to create pastel-toned leather.

PROTAN T is used as a tanner on tripe leather or as a retanner for chrome-tanned leather, to which it imparts particular qualities of fullness also suitable for nappa articles.

PROTAN T can be used in combination with other vegetable, synthetic tannins and/or resins.

METHOD OF USE

During the tanning phase 20 - 24% of tripe weight

In white vegetable tanning in combination with tannins Metal Free synthetics up to half of percentage of tanners

In the retanning phase 5 - 10% of shaved weight
